ASSIGNMENT - 2

Q1. Define a project & project management. Explain characteristics of project management.

→ A project is a temporary activity undertaken to create a unique product, service or result. A project has a specific goal to defined start and end time & limited resources such as time, money and manpower. Examples include developing software, constructing and building and implementing a new banking system.

A project management is the process of planning, organizing, directing & controlling resources to achieve specific project goals within a defined time & budget. It involves managing tasks, people, requirements and communication to ensure successful completion of the project.

Characteristics

- Specific objective - every project has a clearly defined goal or purpose
- Temporary nature - a project has a fixed start & finish time
- Unique outcome - each project produces a unique product or service
- Limited resources - project uses limited resources such as time, budget and manpower
- Risk & uncertainity - projects involve risk that must be managed properly.
- Interrelated activities - a project consists of multiple tasks that depend on each other
- Teamwork - project require collaboration among different team members
- Planning & control - proper planning & monitoring is essential for project success.

Q4. Role of RFP, its content & purpose.

→ RFP (Request For Proposal) is a document issued by an organization to invite vendors and suppliers to submit proposals for providing a product or a service. It is commonly used when organizations want external companies to participate in project development.

The main role of RFP is to help organizations, select vendors by comparing different proposals

Content of RFP.

- Project overview - description of the project & its objectives.
- Scope of work - detailed task & responsibilities
- Technical requirements - system or technology requirements
- Timeline - project schedule & deadlines
- Evaluation criteria - factors used to select the best proposal
- Submission guidelines - instruction for vendors to submit proposals.

Purpose

- to invite proposals from multiple vendors
- to ensure fair competition
- obtain best quality solution
- select the most suitable vendors for the projects

Q5. Feasibility study, its types, content & purpose.

→ A feasibility study is an analysis conducted before starting a project to determine whether the project is practical & achievable. It evaluates the technical, economic & optional aspects of the project

easily planned & managed

Advantages of WBS:

improves project planning

makes task management easier

helps assign responsibilities to team members

improves cost & time estimation

helps monitor project progress

Maintarance:

system support

bug fixing

system updates.

This WBS helps break the project into manageable components & ensures systematic project execution
